

Certificate of Analysis

Sterility & Endotoxin

Tested by: ISO 17025:2017 accredited, and FDA-registered lab:

Client: Peptide Systems, 50 Iron Point Cir, Ste 140, Folsom, CA 95630

Description: BPC-157 5mg + TB-500 5mg

Lot Number: 250312BT

Date Received: 02/09/2025 **Date Analyzed:** 02/13/2025

Test	Method	Specification	Results	Pass/Fail
Sterility	MBI-144	Sterile	no growth @14D	PASS
Endotoxin	USP <85>	NMT 2333 EU/mL	411 EU/mL	PASS

SPECIFICATIONS

Sterility by MBI-144

Tests for a broad range of contaminating microorganisms including aerobic, anaerobic, and spore forming bacteria as well as fungal microorganisms, including yeasts and molds. MBI-144 sterility tests adhere to USP <71> guidelines. A "PASS" indicates the product being examined complies with the test for sterility and no contaminating microorganisms have been found.

USP <85> Bacterial Endotoxin Assay

Uses the kinetic turbidimetric method described in USP <85> Bacterial Endotoxins Test. This test detects toxins released from the cell wall of gram-negative bacteria. A harmonized standard for <85> Bacterial Endotoxins Test has been approved by the Pharmacopeial Discussion Group and has been formally approved by the USP General Chapters Microbiology Expert Committee in accordance with the Rules and Procedures of the 2010-2015 Council of Experts.
